Mode of operation PZM-GPS safety tracking system

The PZM-GPS control panel:

Description: The control panel includes a signaling buttons, indicator light both of safety tracking system and vehicle to vehicle alarm system and wires. The console is also connected with BLUE flashing light which is only used for Vehicle to Vehicle Alarm system.

Mounting place: Dashboard, visible for both crew members, in reach of both crew members, sitting normally in their seats and being fastened with safety belts.

Mounting method: Zippers + double-sided tape.

The PZM – GPS system unit:

Description: The system unit have its own battery so there is no need to connect it to the electric system on the vehicle and recharge it during the rally. Weight: 1400 g / Height: 85 mm / Width: 80 mm / Length: 240 mm

Mounting place: Safety cage tubes behind the crew members seats.

Mounting method: Zippers + adhesive tape.

The PZM – GPS system antennas

Description: The system consists from two separate antennas. The antennas wires must be routed through the most convenient and the best protected areas.

Mounting place: Center of competing vehicle roof

Mounting method: Zippers + adhesive tape.

The PZM – GPS system integrated antenna

Description: The system consists from one antenna which integrate GPS and GSM antennas. The antennas wires must be routed through the most convenient and the best protected areas.

Mounting place: Center of competing vehicle roof, hole 12 mm wide, drilled in the roof for mounting the antenna.

Mounting method: Screw and nut + double sided tape.

The PZM-GPS safety tracking system installed in competing vehicle during the Rally sends and receives the signals to the Rally Control (RC). The system is activated automatically, so it doesn't need any operation before start and after finish the Special Stage.

In case of stopping the competing vehicle on the Special Stage, the system is sending the warning signal to the unit installed in competing vehicle. **The lamps in manipulator panel (GREEN or RED) start blinking and the unit beeps.** That means that operator of RC see the vehicle standing on the Special Stage and expect to have the information from the crew. **Within 1 minute from stopping on the Special Stage route the crew members must press the proper button to clarify the situation.**

PRESSING the GREEN BUTTON means that there is NO NEED to send the emergency service (OK).

*To avoid accidental activation, the **GREEN BUTTON** must be depressed for minimum 2 seconds. Correctly pressing the **GREEN BUTTON** will be confirmed by short blink of green lamp in the button and acoustic signal (two short loud beeps).*

NOT PRESSING the GREEN BUTTON within 1 minute after stop on the Special Stage means the necessity of an assistance and it will initiate the intervention of the emergency service.

In case of emergency, when the crew would need any help form RC the RED BUTTON must be pressed.

*Depressing the **RED BUTTON** means the emergency and the crew need help for themselves or for somebody else (for example, if they noticed any dangerous situation over the Special Stage).*

*To avoid accidental activation, the **RED BUTTON** must be depressed for minimum 2 seconds. Correctly pressing the **RED BUTTON** will be confirmed by short blink of red lamp in the button and acoustic signal (two short loud beeps).*

Please note that the RED BUTTON is not used to call technical support (e.g. towing), and it is used only in life-threatening situations.

Within few second after depressing any button, the lamp inside them will light constantly. That means the information from the car is received by RC and the status of the vehicle is known by the RC operator. In case of any needs the operator of RC can send to the competing vehicle a reminding signal (series of short beeps) and blinking the lamps. The reminding signal can be cancelled by pressing any proper (**GREEN** or **RED**) button on control panel.

The control panel also includes a signaling button and indicator light in BLUE. This is the element of Vehicle to Vehicle Alarm system.

If crew catch up on the Special Stage route another competing vehicle and is going to overtake this slower vehicle should send an information to RC and overtake this slower vehicle, by pressing **BLUE BUTTON** shortly (0.5 second). Then the slower overtaking crew will receive signal with **BLUE** flashing light and an audible signal (two loud beeps). The slower overtaking car confirms the receiving the information about overtaking by pressing the **GREEN BUTTON**.

In case of any problems with the PZM-GPS safety tracking system the PZM-GPS service team will help you in the Service Park.
